Gels for medicine.

For preparation and follow-up care for transurethral procedures.

THE ORIGINAL FROM FARCO —

Instillagel®
Sterile lubricant to facilitate insertion of catheters and instruments.

— Reduces the risk of infection thanks to its proven disinfection action
— Alleviates pain thanks to its anesthetic effect
— Excellent and long-lasting lubricating properties
— Exceptional adherence to the mucous membrane
— Leaves clear view for optical instruments

THE INNOVATION FROM FARCO —

InstillaGel® Hydro
Hydrogel for moist wound treatment of the urethra.

— Supports wound healing and can help reduce scar formation
— Continuous gel film creates a physiological, stress-free, and cytoprotective environment, thus providing the ideal conditions for moist wound care

Instillagel®

Sterile. Safe. Reliable.
Made in Germany.

Traditional lubricant Gel for wound care

Instillagel®

MEDICINAL PRODUCT

For instillation, mucous membrane disinfection, and local anesthesia, e.g., during catheterization, probe insertion (including during surgery), all endoscopic procedures, fistula catheter replacement, intubation (including for ventilation), and for the prevention of iatrogenic damage to the rectum and colon

AREA OF APPLICATION

For instillation, mucous membrane disinfection, and local anesthesia, e.g., during catheterization, probe insertion (including during surgery), all endoscopic procedures, fistula catheter replacement, intubation (including for ventilation), and for the prevention of iatrogenic damage to the rectum and colon

COMPOSITION

Lidocaine hydrochloride 2 % and chlorhexidine digluconate 0.05 %
Methyl-4-hydroxybenzoate & propyl-4-hydroxybenzoate
Hyetellose, propylene glycol, sodium hydroxide, purified water

EXPOSURE TIME

5–10 minutes

Instillagel® 6 ml/11 ml

Active substance: Lidocaine hydrochloride, chlorhexidine digluconate, methyl-4-hydroxybenzoate, propyl-4-hydroxybenzoate. Composition: 6 ml gel contains: 125.40 mg lidocaine hydrochloride HCl, 3.14 mg chlorhexidine digluconate, 3.76 mg methyl-4-hydroxybenzoate, 1.57 mg propyl-4-hydroxybenzoate; 11 ml gel contains: 230.00 mg lidocaine hydrochloride HCl, 5.75 mg chlorhexidine digluconate, 6.90 mg methyl-4-hydroxybenzoate, 2.167 mg propyl-4-hydroxybenzoate. Other excipients: Hyetellose, propylene glycol, sodium hydroxide, purified water. Areas of application: As a gel for mucous membrane disinfection and for local anesthesia, e.g., during catheterization, probe insertion, including intra-operatively, all forms of endoscopy, fistula catheter replacement, intubation, including for ventilation, for the prevention of iatrogenic damage to the rectum and colon. Instillagel® 6 ml/11 ml is suitable for use in adults and children aged 2 years and above.

Contraindications: Instillagel® 6 ml/11 ml must not be used in patients with known hypersensitivity to lidocaine or other local anesthetics of the amide type, in patients with significant disorders of the cardiac conduction system, or if there is hypersensitivity (allergy) to methyl-4-hydroxybenzoate and propyl-4-hydroxybenzoate, chlorhexidine or any of the other ingredients of Instillagel® 6 ml/11 ml in children under 2 years. Use in pregnancy and lactation: Lidocaine should not be used during the first three months of pregnancy unless absolutely necessary. It is unknown whether lidocaine is excreted in human milk, for which reason breast feeding should not take place for up to about 12 hours after administration. Side effects: In spite of the wide safety range of Instillagel® 6 ml/11 ml, undesirable effects of the local anesthetic lidocaine are possible in the case of severe urethral damage. In very rare cases (less than 0.01 %), allergic reactions (in the most serious cases, anaphylactic shock) to a local anesthetic of the amide type and/or chlorhexidine may occur.

Use in children: The systemic absorption of lidocaine may be increased in children and caution is therefore required. In general, the maximum dose should not exceed 2.9 mg of lidocaine hydrochloride per kg of body weight in children between 2 and 12 years of age. This is equivalent to 1.5 ml Instillagel® 6 ml/11 ml per 10 kg body weight. In very rare cases (less than 0.01 %) chlorhexidine and/or methyl-4-hydroxybenzoate or propyl-4-hydroxybenzoate can trigger allergic reactions, including late reactions. Please inform your doctor or pharmacist if you develop any side effects that are not mentioned in the instructions for use. Warning: Methyl-4-hydroxybenzoate and propyl-4-hydroxybenzoate may trigger hypersensitivity reactions, including late reactions. Propylene glycol may cause skin irritation.
